Summary

- System Developer (Telecom) and Industrial PhD researcher in Software Engineering / AI.
- Study driver for capacity and scalability assessments in telecom systems under high load.
- Research: reproducible evaluation and verification of LLM-generated software artifacts, including automated metrics, prompting/RAG strategies, and industrial datasets.

Experience

Ericsson AB — System Developer Sep 2021 – Present
Linköping, Sweden

- Study driver for capacity and scalability evaluations in telecom systems under high load.
- Own and maintain requirements and technical specifications; lead reviews and ensure consistency and traceability.
- Plan and analyze trials to validate large-scale user targets and performance trade-offs; align findings with stakeholders.

Linköping University — Research Engineer May 2019 – Apr 2021
Sweden

- Worked on lab-on-chip devices for smartphone-based imaging surface plasmon resonance (iSPR) detection.

Chengdu Yingnuo Industry Co., Ltd. — Optical Engineer Apr 2017 – Apr 2019
China

- Optical inspection for defect detection; imaging and data analysis.
- Built data processing and analysis scripts in MATLAB and C++.

Education

Eindhoven University of Technology — Industrial PhD Sep 2024 – Present
Topic: Generative AI for software engineering, with focus on evaluation and verification of LLM-generated artifacts

Imperial College London — M.Sc. Optics and Photonics 2015 – 2016

Jinan University — B.Eng. Information Engineering 2011 – 2015

Publications (Selected)

- Chi Xiao, Daniel Ståhl, Jan Bosch. *Towards Automated Evaluation of UML Sequence Diagram Generation With Open-Source LLMs*. SEAA 2026.
- Chi Xiao et al. *UML Sequence Diagram Generation: A Multi-Model, Multi-Domain Evaluation*. ICSE-SEIP 2025.
- Chi Xiao et al. *A portable smartphone-based imaging surface plasmon resonance biosensor for allergen detection in plant-based milks*. Talanta, 2023.
- Chi Xiao et al. *Print-and-stick unibody microfluidics coupled SPR chip for smartphone imaging SPR*. Analytica Chimica Acta, 2022.

Skills

Programming: Python, C++, MATLAB

Tools: Git, Linux, Docker, SQL, GitHub Actions, LaTeX

Engineering focus: capacity/scalability analysis, test design, requirements/specifications, automation, stakeholder alignment

Languages: Chinese (native), English (professional), Swedish (B1)

Awards

Jinan University Scholarships (First Prize: 2012, 2014; Second Prize: 2013)
Honorable Mention, MCM/ICM
